https://shorturl.at/1Sd1A

Professional Summary

Full Stack Developer with hands-on experience building end-to-end applications using React.js, HTML, CSS, Node.js, Supabase, and AWS. Skilled in developing REST APIs, designing scalable backend services, implementing real-time data synchronization, deploying cloud-native applications, and integrating AI-powered solutions.

Education

B.Tech in Computer Science Engineering (IoT Specialization)

Vellore Institute of Technology, Vellore

2022 – 2026

CGPA: 8.36/10

Technical Skills

Languages: JavaScript, Java, Python

Frontend: React.js, HTML, CSS

Backend: Node.js, Supabase, AWS Lambda, API Gateway

Databases: DynamoDB, SQL

Cloud: AWS (Lambda, API Gateway, Bedrock, Amplify)

Tools: Git, GitHub, Postman, Twilio

GenAI/AI: Prompt Engineering, AWS Bedrock

Concepts: Full Stack Architecture, Real-Time Data Sync, Production Deployment

Experience

Full Stack Developer Intern

Coptercode

June 2026 – July 2026

Chennai

- Developed an AI-powered Resume Builder as a full-stack live project.
- Built responsive UI components and integrated the frontend with backend APIs.
- Implemented AI-assisted resume content generation and dynamic resume creation.
- Tested and debugged features to improve application reliability and user experience.

Tech Stack: React.js, Node.js, Supabase, Gen AI – Grok API.

Gen AI and Full Stack Developer Intern

Nipurna IT Solutions Pvt. Ltd.

May 2025 – June 2025

Salem

- Built a serverless backend using AWS Lambda and API Gateway to handle REST API routing.
- Developed React application pages connected to AWS Amplify hosting and backend APIs.
- Integrated Grok API to enable natural language order queries against a DynamoDB database.
- Implemented logging and exception handling across Lambda functions to improve reliability and debugging.

Tech Stack: React.js, Node.js, AWS (Lambda, API Gateway, DynamoDB), Gen AI – Grok API.

Projects

AI-Driven Wearable Fall Detection with Personalized Wellness Coaching

2025

- Architected a full-stack wearable system for real-time fall detection targeting elderly people and athletes, integrating IoT hardware, a companion app, backend services, and a Gen AI wellness coaching layer.
- Engineered the companion app with authentication, real-time sync, and a Twilio SMS pipeline for instant emergency alerts with live location on fall detection.

Tech Stack: Twilio, Gemini API, NodeMCU.

IoT-Based Irrigation Automation System

2024

- Built an event-driven irrigation control system using NodeMCU and IFTTT webhooks to enable remote activation without physical presence.
- Configured Adafruit IO dashboard to trigger relay control commands over Wi-Fi, creating a reliable remote device communication pipeline.

Tech Stack: NodeMCU, IFTTT, Adafruit IO, Webhook API, REST API, Wi-Fi

Patents

An AI-based Wearable Safety System and Method for Integrated Health, Air Quality, and Emergency

Published Patent Application (App. No: 202641029742), 2026

AI-Integrated Wearable Device for Health Monitoring with Dual-Mode Emergency Alerts

Published Patent Application (App. No: 202641010447), 2026

Certifications & Achievements

Java Foundation Certification, Infosys SpringBoard

June 2025

48-Hour Hackathon Participant, Yantra Central, VIT Vellore

Feb 2025

HackerRank Java Badge, 5-Star Gold
